

Safeplan Law

Peace of mind for legal practices

Safeplan is a new offsite-backup solution designed specifically for the requirements of small to medium-sized legal practices in Austria.

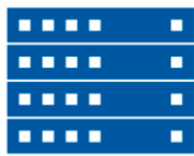

- **Compliance:** all data stays within Austria, protected by the **Safeplan** managed network environment.
- **Secure:** All data is encrypted before it leaves your office, no one but you ever can access your data in **Safeplan**.
- **30-year Audit-trail:** **Safeplan** provides a tamper-proof daily snapshot of your data for up to 30 years - a potentially invaluable data audit trail for a legal practice.
- **Rapid recovery:** A single vendor for both onsite and offsite backups provides rapid recovery in both business-continuity and disaster recovery situations.
- **Single-vendor solution** for onsite and offsite backup.
- **Legal-specific:** **Safeplan** provides unique tools to assist with specific challenges of legal practices such as the possibility of data-splitting when one or more partners form a new legal practice.
- **Efficient:** **Safeplan** backs up to an onsite backup appliance during the day and offsite during the night, so your internet access is not affected during office hours. Deduplication and compression ensure that only data changed during the day is backed up offsite during the night.
- **Economical:** Low setup and maintenance costs geared to the needs of small to medium-sized legal practices.

How Safeplan works - a technical overview

- **Safeplan** provides a NAS (network attached storage) appliance which is located onsite. The NAS contains two disks in RAID-1 (mirrored) fail-safe configuration (the size of disks depends on the plan you select).

- **Safeplan** backs up data from your workstations and servers during the day to the NAS appliance. Backups can be made from Windows or Apple Mac workstations, Windows, Linux or VMWare servers.

Workstations and servers

ONSITE BACKUP

Safeplan onsite NAS

- During the night Safeplan makes a secure, compressed and deduplicated offsite backup from the NAS to the offsite Safeplan data-center (where the backups are maintained on high-availability redundant servers).

Encryption	AES-256 encryption, HMAC-SHA256 data integrity and authenticity
Compression	Zlib
Deduplication	Content-defined chunking using cryptographically strong hash or MAC function (HMAC)-SHA256.

Safeplan onsite NAS

OFFSITE BACKUP

ENCRYPTED

COMPRESSED

DEDUPLICATED

Safeplan data-center

- Safeplan backup snapshots are mountable as userspace file systems for backup browsing and restore with standard tools (file manager etc).

Safeplan installation

- When you order Safeplan, one of our service staff will arrange an appointment to install the Safeplan appliance and setup your onsite and offsite backup. A typical installation will take 4 hours.

Safeplan monitoring

- Safeplan backups are fully managed and monitored by our 24/7 monitoring service. In the event that an onsite appliance fails within the warranty period, a replacement appliance will be sent free of charge. If an onsite appliance fails outside the warranty period, you will be contacted to arrange for replacement.

Additional Safeplan services

- Safeplan can develop and maintain an ISO/IEC 27031:2011 based business-continuity and disaster-recovery plan for your legal practice. This is a quality measure which assures your customers, suppliers and insurers of the readiness of your business to recover from business-continuity challenges or disaster (fire, theft, ransomware and cybercrime attacks) in a consistent and recognized manner.

Safeplan cost calculator

- Hardware and installation fee (excluding 20% VAT)

Safeplan onsite appliance (NAS) including 2x2TB disks. The appliance is under warranty for 2 years. Safeplan will contact you if the appliance needs to be replaced.	EUR 550,00
